

Executive Brief Health Check

*"Michael and the Design Industries team have done an incredible job managing the scope and stand-up of our Atlassian instance.
The rigour and detail in their process and documentation is incredible."*

We welcome your organisation to join our family of national and globally leading businesses, who trust Design Industries to manage, grow and support their Atlassian investment.

Why Your Business Needs an Atlassian Health Check

Atlassian tools like Jira and Confluence are powerful platforms for project management, collaboration, and knowledge sharing. However, **without proper configuration and ongoing maintenance**, these tools can become sluggish, inefficient, and even pose security risks.

A Design Industries Atlassian Health Check provides a **comprehensive assessment** of your Atlassian Cloud instance, focusing on critical areas like:

| Security | Efficiency |
|--|--|
| We identify potential vulnerabilities in user access, permissions, and authentication protocols. | We evaluate workflows, automation, and user management to streamline processes and reduce bottlenecks. |
| Standardisation | Resource Allocation |
| We ensure consistency across projects, enabling smoother collaboration and knowledge transfer. | We analyse license usage and identify optimisation opportunities to maximise your investment. |
| User Experience | Data Management and Backup |
| We assess notification settings, project visibility, and overall user experience to optimise user adoption and engagement. | We evaluate data backup strategy and frequency, and verify data integrity and restore procedures. |

Benefits of a Design Industries Health Check with Your Atlassian Tools

A well-maintained Atlassian environment offers significant benefits for your business:

| Enhanced Security | Improved Efficiency |
|---|--|
| Protect your data and projects from unauthorised access and security breaches. | Streamlined workflows and automation free up time and resources for core business activities. |
| Increased Productivity | Cost Optimisation |
| Empowered users with a user-friendly platform that fosters collaboration and knowledge sharing. | Ensure you utilise licenses effectively and avoid unnecessary costs. |
| Business Continuity and Resilience | Better Visibility and Decision-Making |
| Reduced downtime and system failures and effective disaster recovery plans | Gain valuable insights into project performance and resource allocation for data-driven decisions. |

How Design Industries Can Help

Design Industries is a team of experienced Atlassian specialists dedicated to helping businesses optimise their Atlassian tools, both on on-premise and cloud environments. Our Health Check process involves:

| Collaborative Discovery | In-Depth Analysis |
|---|--|
| We work closely with your team to understand your specific needs, workflows, and pain points. | We conduct a thorough review of your instance configuration, identifying areas for improvement. |
| Actionable Recommendations | Implementation Support |
| Based on our findings, we provide a detailed report with specific steps to enhance security, efficiency, and user experience. | We offer ongoing support to help you implement our recommendations and ensure a smooth transition. |

Better Visibility and Decision-Making

Investing in a Design Industries Atlassian Health Check is an investment in the future of your business.

By optimising your Atlassian tools, you can unlock their full potential, empower your teams, and achieve greater efficiency and success.

"We approached DI because we knew we were not getting the full value from our subscriptions in Jira and Confluence. Initial discussions with the team at DI made us feel immediately comfortable that they had our best interests at heart and that engaging them would yield real benefit. "

-Garreth (TEG)

Our Simple Health Check Process

Step 1: Secure Onboarding

To begin our assessment, we will need **temporary system administrator access** to your Atlassian instance. Your data security is our top priority, and we will adhere to strict confidentiality agreements to protect your information.

Step 2: Comprehensive Analysis

Our Atlassian experts will conduct a thorough examination of your environment, typically within 5-10 hours. This analysis will identify areas for improvement, security risks, and opportunities for optimisation.

Step 3: Actionable Recommendations

Once our assessment is complete, we will provide a detailed report outlining our findings and recommendations. We will also schedule a dedicated walkthrough to explain our insights and answer any questions.

Step 4: Partnership for Success

We believe in a collaborative approach. Together, we will develop a customised roadmap to implement the recommended improvements and achieve your business objectives.

*"Design Industries are dynamic and great at tailoring Atlassian.
We've worked with them for years;
I'm always confident they can support our development
with enthusiasm, professionalism and benchmark support."*

Matt Lecchi, Global IT Operations Manager,
Swisse Wellness, 2018

Investing in a Design Industries Atlassian Health Check is an investment in the future of your business.

By optimising your Atlassian tools, you can unlock their full potential, empower your teams, and achieve greater efficiency and success.
